Instruction

SUBJECT: SAFETY CONDITIONS AND PROGRAMS

The practice of safety will be considered an integral part of the instructional program through fire prevention, emergency procedures and drills, driver education, and traffic and pedestrian safety.

Each principal will be responsible for the supervision of a safety program for his/her school.

The safety program may include, but not be limited to, in-service training, plant inspection, fire prevention, accident recordkeeping, driver and vehicle safety programs, emergency procedures and drills, and traffic safety programs relevant to students, employees and the community.

It shall be the duty of the Board of Education to provide inspections and supervision of the health and safety aspects of the school facilities.

Eye Safety

Eye safety devices are to be provided by the School District for the protection of employees, students and visitors, and worn in the technology education classes and labs when activities present a potential eye hazard. The Superintendent or his/her designee will insure that these devices are properly repaired, cleaned and stored to prevent the spread of germs or diseases after individuals use them.

Ear Protection in Industrial Arts Shop

It is the intent of the Board of Education to, whenever possible, insure that a safe working environment be provided for District employees. This is especially so when an employee is exposed to a high noise level over an extended period of time. Each industrial arts teacher shall have a pair of ear protection devices and will wear them around their neck while in the technology facilities. When high noise equipment is turned on, the teacher will use the ear protection devices.

While students are in the Industrial Arts shop and when high noise equipment is used, students will wear ear protection devices.

Ear protection devices will be provided by the District.
